

Why teams use Dropbox Business with Microsoft Office 365

Leading companies who use Microsoft Office 365 recognize the need for the mobile productivity and collaboration capabilities that Dropbox Business delivers. Together, Dropbox and Microsoft have built a best-of-breed partnership to provide an integrated end-to-end solution for users.

✔ Improve mobile productivity

- Seamless desktop and mobile integrations enable employees to easily access, edit, and share their Office docs anytime, on any device.
- Best-in-class sync from Dropbox ensures that edits will be reflected across stakeholders and devices — so your team always has the latest version on hand.

✔ Simplify collaboration

- The Dropbox badge enables team members to collaborate on files natively in Word, Powerpoint, and Excel. Collaborators can see who else is viewing their file and update it to the latest version with just one click.
- In-line commenting streamlines approval processes, so you can ship work faster. Unlimited deletion recovery and version history means your team will always have a thorough file record to reference.
- New co-authoring capabilities bring real-time collaboration to Office files in your Dropbox Business account through Microsoft Office Online. Open your files from Dropbox directly into Office Online, edit alongside your colleagues and automatically save changes back to Dropbox - all without exchanging an email.

✔ Increase security

- 256-bit AES encryption protects data in transit and at rest, so your most important IP is always protected.
- Comprehensive audit logs give IT the tools to monitor internal and external sharing proactively.
- Remote wipe and account transfer enable IT to recover data from lost devices or off-boarded employees.
